

## MOLYBDENUM ROASTER AND EMISSIONS PROJECT

---

Client: Endako Mines

Description: Following on a feasibility study, (completed in late 2007), Sacré-Davey was retained by Endako Mines to complete the detailed engineering for modifications to roasting and off-gas treatment systems to match the proposed mine expansion at the Endako Mines division of Thompson Creek Metals. SDE's component on the project was worth \$20 million.

The initial study completed by SDE showed Endako Mines that replacement of key process equipment, would increase the recovery of entrained dust at the current or and expanded rates. To remove dust at even 1% higher at a consistent rate is a substantial return for Mo.

Scope: SDE provided Process, Mechanical, Electrical, Structural and support design services to the project.
