

ZERO LIQUID DISCHARGE

-
- Client: Confidential BC Natural Gas processing facility
- Value: Confidential
- Description: System to capture and recover Boiler water treatment system and blow down waste as boiler feed water to eliminate liquid discharge.
- Scope: SDE was contracted to prepare a study and capital cost estimate for a water treatment system. The study and engineering included a water balance for the entire facility, process and equipment selection, specification and budgetary equipment pricing for multiple equipment skids including a new building, interconnecting piping, foundations and road access.
